Product Description

STIHL FCA 135 Battery Powered Edger (Unit Only)

This professional curved-shaft edger is ideal for edging around residential or commercial sites.

As the first battery-powered professional edger with a curved shaft in the STIHL AP Battery System, the FCA 135 is built for extended use in noise-sensitive environments. With a lightweight design, high blade speed, and variable-speed trigger, this edger offers maneuverability ideal for flower beds or well-maintained edges. The line-of-sight markings and adjustable depth wheel help you make precise, clean cuts every time. With its durable, weather-resistant construction, a little change in the forecast won't slow you down. Built with a brushless motor, onboard metal air filter, and the same shaft and gearbox as its gas counterpart, you can count on the FCA 135 to perform with the same high power and dependability you've come to know from STIHL gas-powered products. The FCA 135 professional edger is a powerful addition to your battery-powered lineup, perfect for putting the finishing touches on a job well done.
