Product Description

STIHL SEA 60 Battery Powered Wet/Dry Vacuum

The SEA 60 is the first battery-powered wet/dry vac in the STIHL lineup.

The first AK System battery-powered wet/dry vac in the STIHL lineup, the SEA 60 features compact engineering for lightweight maneuverability and portability. When activated, the ECO Mode function provides up to 35% more battery life on smooth surfaces or low power applications. Because of the automatic shut-off function, liquids can be vacuumed with confidence and the machine will automatically shut off once it reaches a certain capacity in order to prevent fluid from entering the motor. With convenient onboard storage, accessories are kept near at hand and the non-marring wheels are designed to not leave marks on the floor while allowing for easy maneuvering of the machine.
